Frequency and Timing

Embedded Atomic Oscillators

Embedded Atomic Oscillators

Advanced research, cutting-edge engineering and packaging, superior manufacturing and integrated software design all result in embedded atomic oscillators that deliver exceptional performance and unsurpassed accuracy, stability and reliability in the most challenging environments. Combining low drift rates, excellent short-term stability and frequency stability during temperature changes, these oscillators maintain precise frequency and time during extended periods of holdover during GNSS outages or for applications where GPS is inherently unavailable.

Microchip's embedded atomic oscillators are board-mountable and are ideal for portable, battery-powered applications where available power is limited and accurate frequency is required quickly after power-on. With built-in 1 PPS disciplining capability, these solutions deliver atomic clock accuracy combined with low size, weight and power and are ideal for a variety of commercial, industrial, space and defense applications where performance and ruggedness count.

Product	Product Photo	Product Features
Space CSAC- SA45 Chip Scale Atomic Clock		• < 120mW power consumption • < 17cm3 volume • Radiation tolerant: at least 20 kRad Cobalt Gammas • 64 MeV proton irradiations up to 5.7 x 10^{+10} protons/cm^2 total fluence demonstrated full recoveries to all observed events
SA65 CSAC Chip Scale Atomic Clock		• < 120mW power consumption • < 17cm3 volume • Wide temperature range -40°C to +80°C • 10 MHz CMOS-compatible output • Short term stability (Allan Deviation) of 3.0 x 10^{-10} at t=1 sec • Low Noise version (LN-CSAC)
MAC-SA5X Miniature Atomic Clock		• Sub-microsecond holdover for 72 hour missions • Drift rate < 5x10^{11} Hz/Hz/mo (SA55) • Operating temperature -40°C to +75°i • 1PPS output and input for easy calibration/synchronization • Small size: 2 x 2 x 0.7 inches
53100A Phase Noise Analyzer		• Internal Reference (IR) options for OCXOs and atomic clocks • ADEV typically less than 5E–15 at t = 1s; 1E–16 at t = 1000s • Measures up to three devices simultaneously • Close-to-carrier phase noise and AM noise at offsets from 0.001 Hz • Single- or dual-reference oscillator inputs allow cross-correlation measurements with noise floor approaching –175 dBc/Hz

Support

Microchip is committed to supporting its customers in developing products faster and more efficiently. We maintain a worldwide network of field applications engineers and technical support ready to provide product and system assistance. For more information, please visit www.microchip.com:

- Technical Support: www.microchip.com/support
- Evaluation samples of any Microchip device: www.microchip.com/sample
- Knowledge base and peer help: www.microchip.com/forums
- Sales and Global Distribution: www.microchip.com/sales

Training

If additional training interests you, Microchip offers several resources including in-depth technical training and referencematerial, self-paced tutorials and significant online resources.

- Overview of Technical Training Resources: www.microchip.com/training
- MASTERs Conferences: www.microchip.com/masters
- Developer Help Website: www.microchip.com/developerhelp
- Technical Training Centers: www.microchip.com/seminars
